

DATAS LTD, founded in 1992, provides complete solution to the garment manufacturing companies in the area of production performance analysis.

DATAS main product **SPD** - *Sewing & Production Data* - is developed *specifically* for *the garment manufacturing industry* with the aim of having full control of the production's greatest assets: personnel, **time** and equipment.

DATAS selected CAPTOR hardware and eEFFICIENT to measure the present time of the employees at Leineweber RO Ltd. subsidiary of the well know German garment brand producer BRAX.

The **advantage** of this solution is that using the link between eEFFICIENT and SPD, the middle and higher management of Leineweber RO Ltd. gets on-line information about presence, absence(indispensable for production planning purposes), efficiency and payroll.

Both of the system are using as database engine the Microsoft SQL Server. Therefore the two application has a common interface for the personal databases, minimizing the HR responsible people work. The time measured on the CAPTOR hardware is automatically passed on database level to the SPD system productivity and excess calculating procedures.

For detailed information please visit the **DATAS** web site at www.datas.ro .
